PROFESSIONAL SUMMARY

Backend-leaning Full Stack Developer with 3+ years of experience taking SaaS and e-commerce platforms from prototype to production — REST APIs, PostgreSQL/MongoDB schema design, and secure payment infrastructure built to handle real transaction volume. Built the Stripe billing engine powering a SaaS platform's subscription revenue and the multi-role auth plus real-time chat system running a live multi-vendor marketplace. Owns features end-to-end, from schema design through deployment, across six shipped client products.

CORE SKILLS

Languages: JavaScript (ES6+), TypeScript (working knowledge), PHP, HTML5, CSS3

Frontend: React.js, Redux, Tailwind CSS, Bootstrap, jQuery, Ajax

Backend: Node.js, Express.js, REST API Design, Socket.io, MVC Architecture, WordPress

Databases: PostgreSQL, MongoDB, MySQL, Firebase Realtime Database

Cloud & Tools: AWS S3, Firebase, Git, GitHub, Postman, Cron Jobs / Task Scheduling

Integrations: Stripe API, Shopify API, JWT Authentication, Electron.js, Chrome Extension APIs

PROFESSIONAL EXPERIENCE

Full Stack Developer (MERN Stack) — The Brihaspati Infotech Pvt. Ltd., Mohali

Dec 2022 – Jun 2026

- Designed REST APIs and admin dashboards supporting large, multi-field-searchable product catalogs for e-commerce clients, replacing manual product lookups with fast, filtered search for internal ops teams.
- Built Stripe billing infrastructure from the ground up for a SaaS subscription platform — subscriptions, one-time payments, plan management — making it the platform's sole system for recurring revenue collection.
- Owned the security and communication layer for a multi-vendor marketplace: role-based auth (admin/vendor/customer) plus Socket.io live chat, removing the need for buyers and sellers to communicate off-platform.
- Shipped automation, multi-destination search, and lazy-loading features for a Chrome extension, improving page load efficiency and cutting manual steps in multi-destination travel search.
- Redesigned MongoDB and PostgreSQL schemas to support new product features, improving query performance and removing redundant data storage.
- Automated data synchronization between internal systems and third-party APIs via scheduled cron jobs, eliminating manual data-update work for the team.

KEY PROJECTS

- NoblAI:** SaaS subscription management panel — designed and integrated the full Stripe billing flow for recurring plans and one-time payments.
- Online Marketplace:** Multi-role dashboards (admin/vendor/customer) with real-time chat via Socket.io, built to give each user type a distinct, permission-scoped experience.
- FriendZone:** Real-time social platform with Socket.io chat, message translation, and authentication.
- Extreme Performance:** REST APIs and admin panel on Node.js + PostgreSQL for e-commerce catalog and order management at scale.
- BetterEarth:** UI redesign, admin panel rebuild, and Firebase data migration for an existing production product.
- Renner Otto:** Electron-based desktop application for legal case and attorney management.
- Triptop:** Chrome extension with workflow automation, multi-destination search, and lazy-loading for travel use cases.
